

Product Information Sheet

Sticky Wet Glue Insert for use in Delta Traps for Insect Monitoring

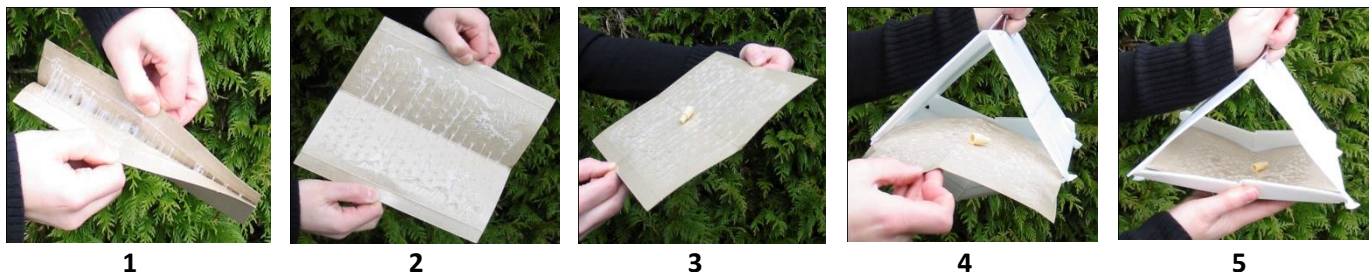

For use with Delta style insect monitoring traps with a floor area 20 x 21 cm.
A cardboard, waterproof insert, with special insect catching glue to catch flying insect pests.

Material:	Waterproof cardboard, folded flat for shipment
Folded Size:	9.25cm wide x 20cm long
Open Size:	18.5cm long x 20cm wide
Packaging:	Supplied in wrapped packs of 3 or 10
Standard Carton	750 per carton (250 x 3 or 75 x 10)

The special insect catching glue remains wet and tacky which is ideal for both indoor and outdoor use where dust and debris may be an issue. The glue is applied across most of the inner surface leaving a dry, unglued area around the inside perimeter of the catching area for ease of handling. The pheromone dispenser lure can be placed directly onto glue surface once removed from its protective sachet.

The glue is extremely tacky and care should be observed when handling to avoid contact with skin, hair or clothing. Glue can be removed by proprietary glue remover or cooking oil.

Assembly

1. Hold by longest open side
2. Peel apart the two sides
3. Apply pheromone lure onto the surface (or use lure holder)
4. Insert glue sheet into the body of the delta trap
5. Fold up the flap to the end of the floor to keep the glue sheet held inside
